

The fastest way to clear a cutting table.

Maximize the profitability of your cutting table with a Walker Magnet System.

Walker can keep your cutting machine cutting.

A cutting table that isn't cutting just doesn't cut it. In fact, it's costing you time and — money. A magnet system from Walker Magnetics can change all that. We have been providing magnetic solutions for over 100 years. Put that experience to work improving your bottom line. Here are some of the ways a Walker magnet system can help:

- Use the magnet to load the plate and then after cutting, unload cut parts and skeleton in one step
- Eliminate time consuming handling methods such as dogs, grabs and chains
- Cut more parts per shift by maximizing torch time
- Separate parts from skeleton to improve the sorting process
- Stop using the cutting table as a sorting table
- Deliver new plates faster
- Move parts through the shop on time
- Increase safety by keeping operators off the table

One size doesn't fit all.

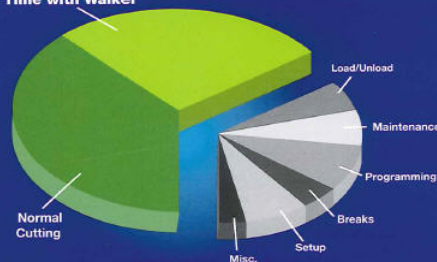

Walker magnet systems are designed to meet the special material handling needs required in precision flame, plasma, waterjet and laser cutting table operations. A Walker applications engineer can work closely with you to tailor a system to meet the specific needs of your operation.
