Rectangular Series RL Magnets are designed to lift plates, slabs and billets of all sizes.

RL’s are found in shipyards, metal working plants and service centers moving large plates to and from cutting tables, fabricating areas, welding departments and receiving and shipping areas.

RL’s can be used individually or in multiples with different types of suspension systems. Walker engineers can supply the complete system including spreader beam, power supply, controller and battery safety back-up.

**RL Series Magnets available for:**
- Single and Multiple Plate Lifting
- Hot Plate Lifting
- Electropermanent designs also available.
